

In the Claims:

Sub Cx  
1. (currently amended) A carrier mount for mounting a personal electronic device to a frame member of an exercise apparatus, which carrier mount comprises:

i) a pouch shaped and dimensioned to hold the device, the pouch having opposed side panels defining major faces and a narrow pouch width between the major faces, the pouch further and having an elongate mouth a opening through which the device may be introduced into the interior of the pouch; and

BY  
ii) a securing arrangement means for releasably securing the pouch to the a frame member ~~comprising exercise apparatus~~, the securing arrangement means including a collar arranged to secure around the frame member, the collar being secured to one of the major faces of the pouch and releasable to permit the collar to be located around the frame member for securing the pouch in close proximity to the frame member.

2. (previously amended) A carrier mount according to claim 1, wherein the pouch comprises a flexible material.

3. (previously amended) A carrier mount according to claim 1, wherein at least a portion of the exterior of the pouch comprises a waterproof or water resistant material.

4. (cancelled)

5. (cancelled)

C4  
Cont

6. (previously amended) A carrier mount according to claim 1, including closure means for partially closing the opening to inhibit removal of the electronic device but defining a smaller opening permitting an electrical cable connected to the device to extend into the interior of the pouch.

7. (previously amended) A carrier mount according to claim 1, including closure means for at least partially closing the pouch opening wherein the closure means draws together the opening defining edges of the pouch.

B1  
Cont

8. (cancelled)

9. (previously amended) A carrier mount according to claim 7, wherein closure means for closing the opening through which the device is introduced comprises a zipper closure.

10. (cancelled)

12. (previously amended) A carrier mount according to claim 11, wherein the collar is tightenable about the frame member, and also subsequently loosenable to permit removal of the securing means from the frame member.

13. (previously amended) A carrier mount according to claim 1, wherein the securing means comprises a rigid or spring tightenable collar bracket.

C4  
Cont

14. (previously amended) A carrier mount according to claim 1, wherein the securing means collar comprises a flexible element arranged to pass over the tubular frame member.

15. (previously amended) A carrier mount according to claim 1, wherein the securing means is a quick release fastening arrangement.

B4  
Back

16. (previously amended) A carrier mount according to claim 1, wherein the pouch is configured to have opposed side panels defining major faces and a relatively shallow depth.

17. (currently amended) A carrier mount according to claim 1, wherein an ~~the~~ aperture for receiving the device is provided along the uppermost edge of the pouch, the uppermost edge of the pouch being substantially arcuate and adapted to receive a portable compact disc player.

18. (currently amended) An apparatus arrangement comprising, in combination:

i) a frame member of an exercise machine apparatus; and

ii) a carrier mount for a personal electronic device, which carrier mount comprises,

a) a pouch shaped and dimensioned to hold the device, the pouch having opposed side panels defining major faces and a narrow pouch width between the major faces, the pouch further and having an elongate mouth a opening through which the device may be introduced into the interior of the pouch; and

CH  
cont  
B  
B  
b) a securing arrangement means for releasably securing the pouch to the a frame member ~~comprising exercise apparatus~~, the securing arrangement means including a collar arranged to secure around the frame member, the collar being secured to one of the major faces of the pouch and releasable to permit the collar to be located around the frame member for securing the pouch in close proximity to the frame member.
